

## Tradition on a new level: TENADO WOOD

Wood craftsmanship is associated with value and tradition. In many companies, drawing is still done conventionally on the drawing board. TENADO HOLZ builds a bridge to classic construction, supplemented by time-saving, innovative functions.

The family company HD Schreinerei GmbH based in Sinsheim Hilsbach, Baden-Württemberg, has been using TENADO HOLZ since the beginning of 2019 for all projects in which individual customer requests are implemented. " *This includes, for example, tailor-made block frames, built-in furniture and everything else that we make ourselves,* " reports Managing Director Achim Dworschak. " *In our work, we benefit a lot from functions such as the drawer generator.* " Here, too, planning was done in the traditional way at the drawing board. The transition to the digital variant was a step with little effort, but a big effect. Torsten Weichard, who works with the software every day for the company, adds: " *The material lists that run automatically in the background are also a relief. This saves a lot of time because they do not have to be created and checked manually.* " The built-in cupboard with interior drawers, integrated wardrobe and lighting is a great example of how craftsmanship and software work together. The design blends in elegantly and precisely under the stairs. Clever functions such as the "IntelliSnap" construction aid and the extensive material libraries round off TENADO WOOD. Thanks to the quick start, the attractively priced all-round talent quickly pays for itself.
